

WHY OWN A HEATED TOWEL RAIL

Look After Yourself

After experiencing the pure pleasure of having a dry towel every morning, with that comforting touch of warmth, you will never want to give it up.

Use less water, Save on electricity

Typically, used bath towels should be washed after every use to reduce bacterial build-up, which increases both water and electricity consumption. The smart alternative is to use a Bathroom Butler heated towel rail to dry your bath towels after every use, which means saving water and electricity with less washing.

A design feature that uses less wall space

Creating a central feature in your bathroom with the simple beauty of a heated towel rail won't take as much space as you may have thought. While towels on non-heated rails should be completely unfolded to try air dry, a towel on a heated towel rail should be folded twice to save space, trap heat and hygienically dry.

Hygienically Dry

Germs and bacteria build up on your bath towels when they don't dry properly, causing a damp musty smell. Drying your towel on a Bathroom Butler heated towel rail reduces the bacterial load by up to 90%, making that after shower stretch for your hygienically dry towel a simple pleasure.

Energy Efficient

Bathroom Butler heated towel rails use Dry Element Technology or DET which ensures quicker heat up times, reaching optimum temperature within 10min. With the wattage of the average size heated rail being the same as a single light bulb, they don't cost much to run either.

COMPLETE CONTROL AT YOUR FINGERTIPS

Integrated controllers on modern-day heated towel rails have become an absolute necessity that give you the choice and flexibility of temperature adjustment and reducing energy consumption.

A SECRET SWITCH THE ESSENTIAL ADDITION

The Personal Temperature Selection Switch or PTSelect is a discreetly built-in temperature control that allows you to adjust the temperature of the Bathroom Butler heated towel rail and to switch it ON and OFF for certain savings on electricity costs.

Features: Temperature Adjustment • ON / OFF Switch • RED LED Indicator

The Total Digital Control (TDC) Timer is a state-of-the-art digital control that can be programmed to run automatically in different modes of operation for up to 75% savings on running costs. See the real difference it makes on your power consumption.

Features: 4 On/Off programs in a 24hr period • Temperature Adjustment • 4 Modes of operation • Screen Auto-Lock • One button push - QUICK RUN • 24hr Clock

ADVANCED TECHNOLOGY

Dry Element Technology, also known as **DET is the pioneering** technology for heated towel rails. It works effectively in drying towels and provides un-paralleled benefits such as RAPID Heating, Direct Intelligent Heating, Controller Options and DUAL Entry electrical connections.

KEEPING TOWELS DRY AND FRESH

Be kind to yourself, put an end to the unpleasant agony of having to reuse a damp towel. Bathroom Butler heated towel rails ensure consistently **dry and fresh towels all year round** even in humid, wet and cool climates.

Function, in perfect form
